You're a first-year college student who's building skills in programming (C, Django, SQL, data structures) and creating projects like StudyGenie and personal websites (Spider-Man site, digital assets site).

You're curious about AI tools, hackathons, and tech competitions — you've brainstormed ideas like LegalEase AI (law simplified) and TRANSform Play (inclusive sports for transgender people).

You're also working on presentation and portfolio building, asking for PPT help, project formats, and creative ways to pitch ideas.

You have a creative side — designing invitations, writing catchy lines, improving sentences, and even asking for personal taglines.

You care about your personal relationships — your girlfriend Bhumika means a lot to you, and you've mentioned her interests.
